

REACH SOCIAL CASE STUDY

Category: Hobbies & Toys (Craft Kits)

GMV Up 150% in One Month. *Product Selection Did the Work.*

A crochet-kit brand had been slow on TikTok Shop, running on its owned IP alone — roughly \$500 a month. We added a licensed-IP kit beside it, and the account tripled month over month.

IP PATHS TESTED

01 Setup

A crochet-kit brand in the Hobbies & Toys category came to TikTok Shop the way a lot of established brands do — with the catalog it already had. Its owned-IP kits had an audience and a track record on other channels. On TikTok Shop, though, the account was moving slowly: the prior month closed at roughly \$500 in GMV. Nothing was broken. The shop was live, the product worked, content was going out. The account just hadn't found the product TikTok's audience wanted to buy right now.

02 Problem

The growth problem wasn't traffic — it was the catalog. Owned IP alone gave the platform exactly one story to test, and that story was converting slowly. Every week spent waiting for the original kits to break out was another week of flat revenue. The question we had to answer: is this an account problem, or a product problem?

Operator note — A slow TikTok Shop account is not always an execution problem. Sometimes the catalog simply doesn't have the product the platform wants to sell.

03 The Licensed IP Test

The brand had recently licensed a well-known entertainment franchise — which gave us a clean experiment. Instead of betting the account on either catalog, we ran both paths at once: keep testing the owned-IP kits, launch the licensed-IP kit alongside them, and let conversion speed decide where the next dollar of effort goes. No redesign, no repricing, no new creative system — one variable, product, tested head to head.

04 The moves

Split

We structured the account as a dual-path test — owned IP on one track, the newly licensed IP on the other — so any change in results would be attributable to product, not to a change in execution.

Launch

We introduced the licensed-IP kit into the shop while the original kits kept running — live exposure for the franchise product without pausing anything that already worked.

Track

We watched which path converted faster once the licensed kit went live, reading conversion speed as the signal for where to concentrate next.

05 Result

This month the account has already reached roughly \$1,500+ in GMV — up 150% month over month, with the month not yet closed. The growth tracked the licensed-IP launch directly: the new kit is what moved, and it moved fast.

THE NUMBERS, BEFORE VS AFTER

Roughly \$500 (prior month) → roughly \$1,500+ month to date. Two data points, one variable changed: the licensed-IP kit.

~\$500

GMV, PRIOR MONTH

~\$1,500+

GMV, THIS MONTH

+150%

MONTH OVER MONTH

Just as important is what the number settles. This wasn't an account that couldn't grow — it was an account that hadn't yet sold the right product. The dual-path structure means the brand now knows, with revenue rather than opinions, which catalog TikTok Shop wants — and the owned-IP kits keep their lane while the test continues.

06

Operator takeaway

Product selection is the highest-order variable on TikTok Shop. Execution compounds — creators, content, ads all matter — but it compounds on top of the product, and no amount of optimization outruns a catalog the audience isn't reaching for. If your brand holds licensed IP, or can get it, that license is a testable asset: run it beside your owned line and let the market vote. Treat TikTok Shop like retail — merchandising decides more than media.
