Two Flat Months, Then the Highest GMV Yet. *Without Spending More.*

A baby and maternity brand's TikTok Shop had held the same GMV level for two straight months. Refining who gets into the affiliate and sampling program, not broader spend, pushed June to \$150K+ month-to-date: the highest month on record.

FLAT MONTHS BROKEN IN 30 DAYS

01 Setup

A baby and maternity brand on TikTok Shop heading into summer with momentum questions. May closed at \$127K in GMV, the same level the account had held for the two months before it. The team was even unsure whether Canada would prove a viable market. The account was not broken. It was flat, and flat is where TikTok Shop programs go to stall.

02 Problem

Two straight months at the same GMV level. The affiliate and sampling program was live and producing, but sampling approvals were loose enough that units were going to creators unlikely to convert, and the retainer roster was not concentrated on the creators actually selling. Growth had stalled without one obvious failure to point at, which is exactly what makes flat months hard to fix with spend.

Operator note — Flat months rarely have a single villain. The fix is usually selection quality: who gets samples, who gets retainers, who gets activated.

03 The Affiliate Sampling Refinement

The Affiliate Sampling Refinement is Reach's play for flat accounts with a working but untargeted affiliate program. Instead of pushing more budget through the same funnel, refine the inputs: activate more of the right affiliates, raise the bar on sampling approvals so units go to creators likely to convert, and rebuild the retainer roster around demonstrated performance. Same program, tighter filters.

04 The moves

Activate

Activated more affiliates across the program, widening the base of creators actively posting for the brand.

Refine

Tightened sampling approval criteria to prioritize creators with a real likelihood of converting, cutting sample waste at the gate.

Select

Improved retainer creator selection so guaranteed-content budget concentrated on proven performers.

05 Result

June hit \$150K+ in GMV with the month still in progress at the time of reporting: the account's highest month yet, up from May's \$127K. The two-month flat streak broke, and it broke on selection quality rather than a broader spend push.

MONTHLY GMV: MAY VS JUNE (MONTH-TO-DATE)

June reported mid-month at \$150K+ and still climbing. May closed at \$127K after two flat months at that level.

JUNE GMV, MONTH-TO-DATE

\$127K

MAY GMV, AFTER 2 FLAT MONTHS

30

DAYS TO BREAK THE STREAK

The delta came from who was in the program, not how much was spent on it. The client's read, mid-month: "Crushing it, thank you, and let's keep the momentum going!" Momentum heading into Q3, on an account that spent the spring flat.

06 Operator takeaway

Flat GMV usually gets diagnosed as a demand problem, and the reflex is more spend. This account broke a two-month plateau by refining who gets in: affiliates activated deliberately, samples approved against conversion likelihood, retainers reserved for proven creators. On TikTok Shop, the affiliate roster is the shelf. Curate it like a retailer and the same budget produces a record month.

Flat months do not fix themselves.
