# GMV $300 to $4,470 in One Week. *Affiliates First.*

A newly onboarded kids products brand went from $300 to $4,470 in weekly TikTok Shop GMV. The lever was one move: outreach to qualified affiliates, started right away.

VERIFIED TIKTOK SHOP PARTNER

| +1,390% | $300 → $4,470 | ~$639/day |
|---|---|---|
| GMV IN ONE WEEK | WEEKLY GMV | AVG. DAILY GMV AFTER, FROM ~$43 |

## 01 Setup

Last week, a kids products brand came on board with us on TikTok Shop US. Its prior-week GMV was $300. That is roughly $43 a day, which is a storefront with a listing and not much else.

The brand was new to us, and our team judged the products to have high potential. That judgment is the whole setup: strong catalog, almost no volume. A catalog like that does not need to be rescued. It needs demand pointed at it.

## 02 Problem

The constraint was simple. Strong products, almost no sales velocity. On TikTok Shop, that gap usually has one cause: not enough people with an audience are showing the product.

A brand can wait for organic discovery, or it can go and get demand. Waiting is slow, and a week of $300 GMV gives the algorithm very little to work with. We chose to go and get it.

> **Operator note —** A $300 week is not a verdict on the product. With almost no sales history, the data tells you about distribution, not demand. Fix distribution first, then read the demand signal.

## 03 The Week-One Affiliate Push

We call it The Week-One Affiliate Push. The rule behind it is plain: when a new brand has promising products and no momentum, the first week goes to affiliates.

Affiliates carry the product to audiences the brand does not own yet. They bring their own content, their own credibility, and their own viewers, That order matters. The system starts by building a source of demand, and only then asks what the brand should spend to scale it.

There is one part of this we want to be careful about. The source for this win records one action, and we are not going to dress it up as more. What follows is what we did, and why it works as a first move.

## 04 The moves

### Qualify

The outreach went to qualified affiliates, not a broad blast. In a new brand's first week, every message to the wrong creator is time the brand does not get back.

### Activate

We started that outreach immediately. Speed was the move: every day of delay is another day at roughly $43 in GMV.

## 05 Result

GMV went from $300 to $4,470 in one week. That is a 14.9x multiple on the starting number, a +1,390% change, and $4,170 in added weekly GMV. Our win log records the gain as roughly $4,000, and the exact difference is slightly higher.

WEEKLY AND DAILY-AVERAGE GMV, BEFORE VS AFTER

Source: brand's TikTok Shop GMV, prior week vs first week of affiliate outreach. Daily average is the weekly total divided by 7.

**14.9×**

| WEEKLY GMV MULTIPLE | +1,390% | +$4,170 |
| --- | --- | --- |
| | GMV CHANGE, 1 WEEK | ADDED WEEKLY GMV |

Put it on a daily basis. The brand averaged about $43 a day before. It averaged about $639 a day across the week that followed. Those are straight averages of the weekly totals, so they smooth out whatever the individual days did, and we are not claiming a daily curve we did not record.

The point is the size of the step. One week of affiliate outreach moved a store from near zero to a run rate that gives the team real sales data to read. That includes which products sell, which creators move them, and where to push next.

## 06 Operator takeaway

Distribution is the first lever for a new TikTok Shop brand, and affiliates are the fastest way to pull it. This win is a small, honest example: a new client, promising products, one clear move, and a measurable jump in the first week.

Two things we take from it. First, do not judge a catalog by its first week of GMV. Judge it after it has been shown to people. Second, start the creator work on day one, not once the rest of the setup is perfect.

We do not know yet how far this brand goes, and we will not guess. A single week is a start, and the work from here is to turn a spike into a repeatable system. That is what we build, and a strong first week is the best place to start.

**Have a catalog with promise and no momentum yet?**
