Category: pet supplies (TikTok Shop)

A \$70K Goal Hit \$79K. *Through a Constant Stream of Platform Violations.*

A pet supplies brand in a compliance-sensitive category beat its May GMV goal by \$9,000, while absorbing near-constant TikTok Shop violations and account bans. The result came from a system built to keep moving through enforcement, not around it.

\$79K

MAY GMV

+\$9K

OVER GOAL

13%

ABOVE TARGET

01 Setup

A pet supplies brand on TikTok Shop in a product category the platform polices hard. Listings get flagged, violations get issued, and ad accounts get suspended with above-average frequency. The team's job is to hold GMV performance while the platform throws enforcement actions at the account on a regular basis. May's target was \$70,000.

02 Problem

In a compliance-sensitive category, disruption is not an event, it is the operating environment. Violations and account bans are a near-constant stream the team has to absorb without losing momentum. Most accounts would treat each ban as a fire drill that stalls growth. Here, the constraint was structural: how do you grow GMV when the platform can pull the rug at any moment?

Operator note — In a policed category, resilience is the strategy. The team that keeps GMV moving through violations beats the team that only performs when conditions are clean.

03 The Violation-Resilient Growth System

The Violation-Resilient Growth System treats compliance friction as a constant to be managed, not a surprise to react to. It runs on three habits: keep GMV Max campaigns optimized so the growth engine never goes idle, hold a close working line with the platform account manager so issues get heard, and appeal every violation the moment it lands so downtime is measured in hours, not days. None of it is glamorous. Together it is what let the account beat its goal in a month full of enforcement actions.

04 The moves

Keep GMV Max on

Stayed on top of GMV Max campaigns so the paid growth engine kept running even as parts of the account came under enforcement.

Work the platform AM

Kept close communication with the platform account manager so violations and suspensions got escalated and resolved faster.

Appeal immediately

Appealed violations as soon as they hit, compressing downtime and keeping listings and ads live as much as possible.

05 Result

The account finished May at \$79,000 in GMV, beating the \$70,000 goal by \$9,000. That is 13% over target. It did not happen in a clean month. It happened across active compliance challenges that ran the whole way through, which is what makes a 13% beat in this category worth more than a bigger number in an easy one.

MAY GMV: GOAL VS ACTUAL

May GMV goal vs actual. Goal \$70K, actual \$79K, a \$9K beat.

\$79K

MAY GMV

+\$9K

OVER THE \$70K GOAL

13%

ABOVE TARGET

The beat is the headline. The conditions are the proof. Holding 13% over goal while navigating a steady flow of violations and bans is not luck, it is a system that assumes disruption and keeps producing anyway. For a brand in a policed category, that reliability is worth more than a flashier number in a forgiving one.

06

Operator takeaway

If you sell in a category TikTok Shop polices closely, build for resilience, not for clean conditions. Keep your growth engine optimized so it never goes dark, hold a real relationship with your platform account manager, and appeal every violation the moment it lands. The brands that win compliance-heavy categories are not the ones who avoid enforcement, they are the ones who keep GMV moving through it.
